

Step 1 : Basic Data Understanding

Explanation :

We calculate the % of who have churned

1.case when churn = 'yes' then 1 end count churned customers

2.Divide by total count to get a percentage

Step 2 : Cohort Analysis(Tenure-Based)

Explanation :

1.Case creates tenure based cohorts

2. We count churned vs total customers per cohort

3.higher churn rate in early tenure = problem with early management

Step 3 : Customer Segmentation : we can classify customer as high risk, medium risk, loyal based on behaviour and churn pattern

Explanation :

1.Customer on month to month with high cost low tenure are risky

2.Long term contract with long term tenure is loyal

Step 4 : Segment Churn rates by Contract type

Explanation :

1.Month to Month customers usually show the highest churn rate

2.This suggestion retention campaigns like discount or loyalty points for these customer

Step 5: Payment method churn

Explanation :

If customers using electronic check that segments needs focus special focus. Like switching to auto pay or credit card
